

MS-RM / PetPooja

Frontend Test Plan & Launch Checklist

Role tested: **Restaurant Owner** | Region: **Australia (A\$ / GST 10%)**

Goal: click through every screen, confirm each feature works, and decide if the software is ready to go live.

Tester (intern) name	_____
Date of testing	_____
Owner login email (given to you)	_____
Owner password / temp password	_____
App URL	https://petpooja-admin.vercel.app
Browser + version	_____
Bug log file used	MS-RM_Bug_Audit_Log.xlsx

How to use this document

You are testing the software as a real restaurant owner would. You do **not** need to be technical. For every step below, do the action and check you see the expected result.

- **Tick "Pass"** if it works exactly as the "You should see" column says.
- **Tick "Fail"** if anything is wrong, missing, slow, ugly, or confusing — then immediately write it in the Excel bug log (next page explains how).
- Test the modules **top to bottom in order** — later modules depend on data you create in earlier ones.
- Take a screenshot of every problem (full screen). Name it like **M3-step5.png** (module 3, step 5).

Logging a problem in the Excel (MS-RM_Bug_Audit_Log.xlsx)

Open the "Bug Log" tab and fill one row per problem:

Bug ID	Auto / type B-001, B-002 ...
Module	Which module number + name (e.g. "3 - POS Terminal")
Feature	The exact button/field (e.g. "Split bill")
Steps to reproduce	Short numbered steps so a developer can repeat it
Expected	What should have happened
Actual	What actually happened
Severity	Critical / High / Medium / Low (see below)
Screenshot	File name of your screenshot
Status	Leave as "Open"

How bad is it? (Severity)

Level	Meaning
Critical	Blocks work / loses money / data. Cannot launch. e.g. cannot place an order, payment fails, page crashes.
High	Major feature broken but a workaround exists. e.g. report shows wrong total, KOT not printing.
Medium	Noticeable but not blocking. e.g. wrong label, filter not working, slow screen.
Low	Cosmetic. e.g. spacing off, typo, colour, icon misaligned.

Tip: if a screen is blank or shows an error toast, screenshot it, note the time, and refresh once. If it still fails, log it as Critical/High.

1. Login & Onboarding

What it is: The owner signs in and (first time only) completes the setup wizard.

Where to find it: App URL → Sign in. Onboarding opens automatically for a brand-new owner.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open the app URL and click Sign In	Login screen loads within a few seconds (first load may take ~50s if the server was asleep — wait, do not refresh repeatedly).	■	■
2	Enter the owner email (any capitalisation) + password, click Login	You land on the Dashboard. Wrong password shows a clear error, not a blank screen.	■	■
3	If the 7-step setup wizard appears, fill Business Profile (name, country = Australia)	Currency shows A\$, ABN/ACN fields appear (not GSTIN). City placeholder = Sydney, phone prefix = +61.	■	■
4	Complete the wizard or click "Skip setup & go to dashboard"	You reach the dashboard. No sideways/horizontal scrolling on the wizard.	■	■
5	Sign out (bottom-left) and sign back in	Session ends and you can log in again cleanly.	■	■

Tiny things to also click / check

- Email is case-insensitive (try ONE capital letter in the email — still logs in).
- Refresh the page while logged in — you stay logged in.
- Wizard progress bar is aligned; step icons turn green as you finish.

Interlinking check (does it flow to other screens?)

Anything entered in the wizard (outlet name, tables, menu, staff) must appear later in Menu, Tables and Staff modules — you will verify this in those modules.

2. Dashboard & Business Health

What it is: The home screen with today's key numbers and shortcuts.

Where to find it: Left sidebar → Dashboard / Business Health.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open the Dashboard	Cards show Today's Revenue, Orders, Tables, Inventory alerts. Numbers are A\$.	■	■
2	Note the "Today's Revenue" and "Orders" numbers	Write them down — you will re-check them after placing test orders.	■	■
3	Click each shortcut card (Tables, Kitchen, Reports, etc.)	Each opens the correct screen.	■	■
4	Open Business Health	A score / breakdown loads without error.	■	■

Tiny things to also click / check

- All money shows A\$ (never ■).
- No "undefined", "NaN", or blank cards.
- Open tab count matches reality.

Interlinking check (does it flow to other screens?)

After you place + settle orders later, return here and confirm Today's Revenue & Orders went UP by the right amount.

3. POS Terminal (most important)

What it is: Where staff take orders. Test this thoroughly.

Where to find it: Sidebar → POS Terminal.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open POS. Pick a Table (dine-in) or Takeaway	Menu items load with A\$ prices.	■	■
2	Add several items to the cart; change quantities	Cart updates totals live; GST (10%) shows; total is correct.	■	■
3	Apply a discount / coupon if available	Discount reduces the total correctly.	■	■
4	Add a modifier / note to an item	Modifier shows on the cart line.	■	■
5	Send to Kitchen (KOT) / Save order	Success message; order gets a number.	■	■
6	Click PAY → choose Cash → enter amount → confirm	Payment completes; receipt/bill can be viewed; cart clears.	■	■
7	Do a SPLIT BILL: open Split, split equally between 2, pick methods, process	Each part processes; order closes only when fully paid.	■	■
8	Do a PART/MULTI-TENDER: pay part by cash, leave balance	Order stays OPEN with a balance; you can pay the rest later.	■	■

Tiny things to also click / check

- Payment methods shown are AU ones: Cash, EFTPOS, Card (NOT UPI/Razorpay).
- Change/return is calculated for cash.
- Gratuity/tip selector works.
- Search a menu item by name works.
- Switching tables keeps the right cart.

Interlinking check (does it flow to other screens?)

- &rand; New paid order → appears in Running Orders (module 5).
- &rand; Items sent to kitchen → appear on the KDS (module 4).
- &rand; Inventory of used ingredients → goes DOWN (module 9).
- &rand; Revenue → updates Dashboard (module 2), Reports (module 14) and EOD.
- &rand; A partly-paid order → shows a "Partial · Bal A\$xx" badge in Running Orders.

4. Kitchen Display (KDS)

What it is: The kitchen screen that shows incoming orders/tickets.

Where to find it: Sidebar → Kitchen Display.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open KDS after sending a KOT from POS	The order ticket appears with its items, table/order number and a timer.	■	■
2	Mark an item / ticket as "Preparing" then "Ready"	Status changes; timer behaves; colour changes.	■	■
3	Bump / complete a ticket	Ticket clears from the active board.	■	■

Tiny things to also click / check

- Timer counts up; late orders highlight.
- Sound/visual alert on new ticket (if enabled in Settings).
- Station routing (if used) shows the item on the right station.

Interlinking check (does it flow to other screens?)

&ran; "Ready" status → should reflect on Running Orders (module 5).

&ran; Aggregator orders (module 13) → should ALSO appear here automatically.

5. Running / Live Orders

What it is: All currently-open orders across the restaurant.

Where to find it: Sidebar → Live Orders.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Live Orders	Your open test orders are listed with status, table, amount, timer.	■	■
2	Use the status filters (Pending / Confirmed / Billed) and search	List filters correctly.	■	■
3	Find the partly-paid order from module 3	It shows an amber "Partial · Bal A\$xx" badge.	■	■
4	Open an order and settle the remaining balance	Order closes and leaves the live list.	■	■
5	Switch between grid and list view	Both render cleanly, no sideways scroll.	■	■

Tiny things to also click / check

- KOT / item counts are correct.
- Cancel / void an order works (with reason).
- Bill preview opens and totals match POS.

Interlinking check (does it flow to other screens?)

Closing an order here → revenue lands in Reports/EOD; table frees up in Tables (module 7).

&ran;

6. Order History

What it is: Past (completed/cancelled) orders.

Where to find it: Sidebar → Order History.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Order History	Completed orders from your test session are listed.	■	■
2	Filter by date / type / status; search an order number	Filters return the right rows.	■	■
3	Open one order	Full detail: items, taxes, payments (incl. split/part), totals.	■	■

Tiny things to also click / check

- Export / download (if present) produces a file.
- Amounts in A\$ and match what you charged.

Interlinking check (does it flow to other screens?)

Every order you settled in POS/Running Orders must appear here with the correct payment breakdown.

&ran,

7. Tables, Floor, Reservations & QR

What it is: Table layout, reservations and QR-code ordering.

Where to find it: Sidebar → Tables / Reservations / QR Codes / QR Orders.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Tables	Tables created in onboarding are shown with correct status (free/occupied).	■	■
2	Occupy a table via POS, then check Tables	That table shows occupied + linked to the order.	■	■
3	Create a reservation	It saves and shows on the reservation list / calendar.	■	■
4	Open QR Codes and generate / view a table QR	A QR image is produced; download works.	■	■

Tiny things to also click / check

- Add / edit / delete a table works.
- Table count matches onboarding.
- Reservation time/seats validation works.

Interlinking check (does it flow to other screens?)

&ran; Paying a dine-in order → frees the table here.

&ran; A QR order placed by a customer → should arrive in Running Orders + KDS.

8. Menu Management

What it is: Categories, items, prices, availability.

Where to find it: Sidebar → Menu.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Menu	Categories + items from onboarding are listed with A\$ prices.	■	■
2	Add a new category and a new item with a price	Both save and appear immediately.	■	■
3	Edit an item price / name; toggle availability off	Changes save; unavailable item is marked.	■	■
4	Delete a test item	It is removed (or soft-deleted) cleanly.	■	■

Tiny things to also click / check

- Veg/non-veg tags, photos, variants, modifiers save.
- Search & category filter work.
- No leftover hardcoded sample categories like "Combos"/"Main Menu" that you did not create.

Interlinking check (does it flow to other screens?)

&ran; New item → appears in POS (module 3) immediately.

&ran; Item marked unavailable / out of stock → shows on the 86 Board (module 13) and hides in POS.

9. Inventory, Purchase Orders & Central Kitchen

What it is: Stock levels, recipes, purchase orders, central kitchen transfers.

Where to find it: Sidebar → Inventory / Purchase Orders / Central Kitchen.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Inventory	Stock items listed with current quantity + units.	■	■
2	Note the stock of an ingredient used by a menu item	Write down the number.	■	■
3	Place + pay an order in POS that uses that ingredient, come back	Stock has DECREASED by the recipe amount.	■	■
4	Create a Purchase Order; receive it	Stock INCREASES; PO status updates.	■	■
5	Trigger / view a low-stock alert	Alert shows when stock is below threshold.	■	■

Tiny things to also click / check

- Add / edit stock item, set reorder level.
- Central kitchen transfer between outlets (if multi-outlet).

Interlinking check (does it flow to other screens?)

&ran; Selling items → auto-deducts here (recipe link).

&ran; Stock hitting zero → that menu item appears on 86 Board (module 13).

10. Customers, CRM & Loyalty

What it is: Customer database, history and loyalty points.

Where to find it: Sidebar → Customers / CRM.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Customers and add a new customer (name + phone)	Customer saves and appears in the list.	■	■
2	In POS, attach this customer to an order and pay	Order is linked to the customer.	■	■
3	Re-open the customer	Their order history + total spend updated; loyalty points earned (if enabled).	■	■
4	Redeem loyalty points on a new POS order (if enabled)	Points reduce the bill; balance goes down.	■	■

Tiny things to also click / check

- Search customer by phone/name.
- Edit customer details saves.

Interlinking check (does it flow to other screens?)

- &raf; Customer attached in POS → shows here with correct spend & points.
- &raf; Loyalty redeemed in POS → balance updates here.

11. Discounts, Promo Codes & Pricing

What it is: Discounts, coupon codes and dynamic/festival pricing.

Where to find it: Sidebar → Discounts / Promo Codes / Dynamic Pricing.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Create a promo code (e.g. 10% off)	It saves and is listed.	■	■
2	Apply that code in POS	Discount applies correctly to the bill.	■	■
3	Create a discount rule	Rule saves and can be toggled on/off.	■	■

Tiny things to also click / check

- Expiry date / usage limit respected.
- Invalid code is rejected in POS.

Interlinking check (does it flow to other screens?)

ran, Promo created here → usable in POS (module 3) and reflected in Reports.

12. Payments, Credit Notes & Settlements

What it is: Payment records, refunds/voids/credit notes, and end-of-day settlement.

Where to find it: Sidebar → Payments / Credit Notes / Settlements.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Payments	All test payments listed (cash, eftpos, split, part) with A\$ amounts.	■	■
2	Create a Credit Note / void / refund on a paid order	It records and the order reflects it.	■	■
3	Open Settlements and reconcile a day	Totals match the payments you took.	■	■

Tiny things to also click / check

- Filter payments by method/date.
- Refund reason captured.

Interlinking check (does it flow to other screens?)

- &ran; Every POS payment → appears here.
- &ran; Settlement totals → match Reports/EOD (module 14).

13. Aggregators, Channels, 86 Board & Own Delivery

What it is: Food-delivery apps (Uber Eats / DoorDash / Menulog), channel pricing/analytics, item 86, own delivery.

Where to find it: Sidebar → Aggregators / Channel Analytics / 86 Board / Own Delivery / Delivery Payouts.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Aggregators	AU platforms show: Uber Eats, DoorDash, Menulog (NOT Swiggy/Zomato).	■	■
2	Use the "simulate order" (if available) for a platform	A test delivery order is created.	■	■
3	Check KDS + Running Orders	The simulated order appears in BOTH automatically.	■	■
4	Open 86 Board	Items in stock are available; mark one item "86" (out)	■	■
5	Confirm in POS	The 86'd item is hidden / blocked from ordering.	■	■
6	Open Channel Analytics	Per-channel revenue / orders / commission breakdown shows.	■	■

Tiny things to also click / check

- Per-channel menu price markup saves.
- Own-delivery dispatch screen opens.
- Delivery Payouts / commission report loads.

Interlinking check (does it flow to other screens?)

&ran; Aggregator order → KDS + Running Orders + Channel Analytics.

&ran; Out-of-stock ingredient (module 9) → auto-86s the item here across channels.

14. Reports, Menu Analytics & EOD

What it is: Sales reports, item performance and end-of-day closing.

Where to find it: Sidebar → Reports / Menu Analytics / EOD Report.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Reports	Sales totals, payment-method split, A\$ amounts; date filter works.	■	■
2	Compare revenue to what you charged today	Numbers MATCH your test orders.	■	■
3	Open Menu Analytics	Best/worst sellers based on your test orders.	■	■
4	Run the EOD Report / close the day	Cash, card, eftpos, split tenders are itemised and total correctly.	■	■

Tiny things to also click / check

- Export to PDF/Excel works.
- Empty date range shows "no data", not an error.

Interlinking check (does it flow to other screens?)

Totals here → must equal Payments + Settlements + Dashboard for the same day. This is the big cross-check.

&ran,

15. Staff, Rostering & Staff Management

What it is: Staff accounts, roles, PINs, rosters.

Where to find it: Sidebar → Staff / Staff Management / Rostering.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Staff	Staff created in onboarding are listed with their roles.	■	■
2	Add a staff member (name, role, PIN)	Saves and appears.	■	■
3	Create a roster / shift	Shift saves on the calendar.	■	■
4	Edit a role / permission (if available)	Change is saved.	■	■

Tiny things to also click / check

- PIN is required and validated.
- Deactivate staff works.

Interlinking check (does it flow to other screens?)

Staff added → can be assigned to orders in POS; appears in performance in Reports.

&ran;

16. Accounting, Payroll, Assets, Budgets, GST & BAS (Australia)

What it is: AU finance suite: ledger, payroll, fixed assets, budgets, invoices, GST/BAS, Xero.

Where to find it: Sidebar → Accounting / Payroll / Fixed Assets / Budgets / Invoices / GST & BAS.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Accounting	Ledger / financial statements load in A\$.	■	■
2	Open GST & BAS	GST is 10%; BAS figures compute from your test sales.	■	■
3	Open Payroll	Pay run / employees screen loads.	■	■
4	Open Invoices and create a customer invoice	Invoice saves with GST line; PDF/preview works.	■	■
5	Open Budgets / Fixed Assets	Each screen loads and lets you add an entry.	■	■

Tiny things to also click / check

- Xero connect button (AU Integrations) opens the auth flow.
- Numbers are A\$ with correct GST.

Interlinking check (does it flow to other screens?)

Sales/payments → flow into ledger, GST and BAS figures.

&ran;

17. Settings (all tabs)

What it is: Outlet preferences, tax, hardware, payments, etc. Confirm SAVING actually works.

Where to find it: Sidebar → Settings.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Settings → General; change Restaurant Name; click Save Settings	Success toast; reload the page — the change PERSISTS (not lost).	■	■
2	Tax & GST tab: confirm ABN/ACN fields (AU), GST 10%; edit + save	Saves and persists.	■	■
3	Payment tab: AU methods (Cash/EFTPOS/Card); toggle one; save	Persists; reflects in POS payment options.	■	■
4	Hardware tab: toggle Cash Drawer / Barcode / Scale; save	Each toggle persists after reload.	■	■
5	Voice POS tab: change language/options; save	Persists after reload.	■	■
6	Appearance: change brand colour / logo (owner); save	Colour applies live; logo updates.	■	■
7	Security tab (owner only): change password using current + new	Success; sign out and log in with the NEW password works.	■	■

Tiny things to also click / check

- NO red "No head office linked" error anywhere.
- Receipt printer / KDS tabs save.
- Every tab's "Save" shows success and survives a refresh.

Interlinking check (does it flow to other screens?)

&ran; Payment methods set here → show in POS.

&ran; Brand colour → applies across the app.

&ran; New password → used at next login.

18. Integrations, Subscription & Billing

What it is: Third-party integrations and the SaaS subscription/billing for this restaurant.

Where to find it: Sidebar → Integrations / AU Integrations / Subscription / Billing.

Step-by-step

#	Do this	You should see	Pass	Fail
1	Open Integrations / AU Integrations	Integration cards load (Square, Xero, etc.); connect buttons work.	■	■
2	Open Subscription / Billing	Current plan, usage and invoices show in A\$.	■	■
3	View / download a billing invoice	Opens / downloads correctly.	■	■

Tiny things to also click / check

- Plan limits shown.
- No broken images / placeholder logos.

Interlinking check (does it flow to other screens?)

Usage (orders this month) → should match what you generated while testing.

19. End-to-End Interlinking Flows (do these LAST)

These prove the modules talk to each other. Do each flow fully and tick it. If a number does not match at the end, log it as **High** or **Critical**.

Flow	Steps & what to confirm	Pass	Fail
Flow A — Full dine-in lifecycle	1) Menu: add item "TEST BURGER A\$15". 2) POS: open a table, add TEST BURGER x2, send KOT. 3) KDS: see the ticket, mark Ready. 4) Running Orders: see it open, settle by SPLIT bill. 5) Tables: table is now free. 6) Inventory: burger ingredients went down. 7) Reports + Dashboard + EOD: revenue went up by A\$30 (+GST) and order count +1.	■	■
Flow B — Partial payment	1) POS: order A\$50, pay A\$20 cash (part). 2) Running Orders: shows "Partial · Bal A\$30". 3) Re-open, pay A\$30. 4) Order closes; Reports shows the full A\$50 once, split into two tenders on the receipt.	■	■
Flow C — Aggregator order	1) Aggregators: simulate an Uber Eats order. 2) KDS: it appears. 3) Running Orders: it appears. 4) Channel Analytics: Uber Eats revenue + commission updated.	■	■
Flow D — Auto-86 from stock	1) Inventory: set one ingredient to 0 (or sell until 0). 2) 86 Board: the linked menu item shows "out". 3) POS: that item is blocked/hidden.	■	■
Flow E — Settings drives POS	1) Settings: turn a payment method off, Save. 2) POS: that method no longer appears at PAY. 3) Turn it back on; it reappears.	■	■
Flow F — Customer + loyalty	1) Customers: add a customer. 2) POS: attach them, complete a paid order. 3) Customer profile: spend + points updated. 4) Next POS order: redeem points, bill reduces.	■	■

20. Launch Decision (fill in at the end)

After all modules + flows are done, summarise from your bug log:

Total tests passed	_____
Critical bugs (must be 0 to launch)	_____
High bugs	_____
Medium bugs	_____
Low bugs	_____
Modules fully working	_____
Modules with problems	_____

Go / No-Go rule

- **GO (ready to launch):** 0 Critical and 0 High bugs; all End-to-End flows A–F pass.
- **CONDITIONAL:** 0 Critical, a few High — launch only after those High bugs are fixed & retested.
- **NO-GO:** any Critical bug, or any End-to-End flow fails. Fix, then re-test from that module.

Tester signature: _____ Date: _____ Decision (GO / CONDITIONAL / NO-GO): _____
